Foreword.

Publication of the present report marks the introduction of new index numbers of employment and payrolls on the base 1939=100. The Canadian Standard Industrial Classification has been used as the basis for grouping records according to industrial headings. The monthly bulletins "Employment and Payrolls", will carry forward all the series contained in this report. Figures previously published in "The Employment Situation" cannot be compared directly with records herewith presented. The project has been carried out by Miss E.L. Hughes in the Employment Section of which Miss M.E.K. Roughsedge is Chief.

Much of the back material on wages and salaries used in reconstructing the payroll series was abstracted from Annual Census of Industry files. It was nevertheless necessary to obtain, at a much later date, 1939-41 statistics directly from many thousands of firms. The Bureau takes this opportunity of thanking the officers of establishments whose assistance made this new record possible, as well as expressing appreciation of the excellent co-operation rendered in the monthly surveys of employment, payrolls and man-hours over a period of many years.

(COMPOSITES OF NINE NON-AGRICULTURAL INDUSTRIES)
1939=100

Employment, Payrolls and Weekly Wages and Salaries,
1947-1950.

Introduction.

General.-- The material contained in this bulletin gives further results of a project commenced some time ago, of which the first data were issued in 1948, in a report entitled "Average Weekly Salaries and Wages of Persons Employed in Manufacturing, Mining and Logging, 1939, and in 1942-47". That publication explained that the preparation of a new series of monthly index numbers of employment and payrolls on a 1939 base as 100 was under way, to replace the series computed on the 1926 base for employment, and June 1, 1941, for payrolls. In the intervening period, the recapitulation of previously published material on the Canadian Standard Industrial Classification and on the 1939 base has been effected for the years, 1947-50. The use of the former base periods has now been discontinued; in future, the monthly index numbers will be published only on the 1939 base, in the monthly bulletin, "Employment and Payrolls", and the statistics will be arranged in accordance with headings of the new classification of industries.

The use of the new base period and the new industrial code invalidates comparisons of the present material with that formerly published. Summary and detailed statistics for Canada, with summary figures for the 9 older provinces and 22 cities are given in this bulletin. At an early date, a supplementary report giving detailed data, industrially, for the provinces and the cities in the period, 1947-1950, will be issued.

The following notes deal, briefly, with differences between the present and the former industrial classifications, and with the methods followed in reconstructing the data on employment and payrolls for the period since 1938.

Industrial Classification.-- The classification formerly used in compiling the monthly statistics differs considerably from that now in use, particularly in the grouping of industries within the manufacturing class. Notable among the changes resulting from the transfer of the statistics to the Canadian Standard Industrial Classification are: (1) the removal of central electric power stations from manufacturing to the public utilities operation group, which also includes gas manufacture and distribution, water and sanitary services and other public utilities (except transportation); (2) the transfer of certain railway maintenance-of-equipment employees from manufacturing to transportation; (3) the reclassification of certain types of food processing from manufacturing to trade; (4) the disappearance of communications as a separate division, and their inclusion in the major industry division, transportation, storage and communications, involving the incorporation of data for employees of railway telegraphs in the steam railways group; and (5) the transfer of employees engaged in maintenance-of-way and structures work from the construction and maintenance group, also to steam railways, under transportation, storage and communications. Other less important changes were also made within classes; one of these is the inclusion of brokerage employees in the bank and trust company group, to produce the banking, investment and loan class. The finance industries, for which data were first collected in 1939, are now incorporated in the composite index numbers and averages.

The 1939 Base.-- Late in 1939, arrangements were being made to recompute the index numbers of employment prepared monthly from 1920, on the 1935-39 average as 100, those years having been selected as a new reference period for Dominion Bureau of Statistics' index numbers. Wartime statistical requirements made necessary the

CHART 2.

establishment of statistics of payrolls and average earnings to supplement the figures of employment, in order to provide background material for organizing the industrial war effort and the control of inflation, and for numerous other purposes. The complementary series of weekly payrolls in leading industrial establishments was therefore instituted early in 1941.

From the first publication of the earnings data, there was a keen interest in pre-war comparisons. Therefore, it was decided to obtain the data required to establish a payroll record from 1939 on the same basis as the employment series, and that 1939 would be used as the reference period for both sets of index numbers. (United States index numbers of employment and payrolls are also based on 1939 averages as 100).

Sources of the Base Data.- In obtaining the necessary basic material on payrolls, the records of the Census of Industry, relating to practically all establishments in the industries surveyed annually, were used wherever possible. Where no suitable information was available in the Bureau, requests were made directly to the firms co-operating in the monthly enquiries for a statement of their annual disbursements in wages and salaries in the years, 1939, 1940 and 1941. The procedure followed in using the Census of Industry materials for that period may briefly be described as follows. The appropriate data for the required years, abstracted from the Census records for the individual establishments, were compared with the current employment series for the same establishments in the period, 1939-41, and with the comparable payroll record in 1941. In a majority of cases, agreement was close, and no further validation of the use of the annual figures of the Census of Industry for the purpose at hand was required. Where there were significant differences in the annual and monthly data, the materials from the two sources for 1942 and later years were studied to discover appropriate factors of adjustment. Where reconciliation could not be effected, the firms were asked to explain the differences, or to supply 1939-41 statistics of wages and salaries comparable with those of employment previously reported to the monthly surveys.

In the industries for which no record of payrolls existed in the Bureau prior to 1941, employers were requested to furnish the necessary statistics for 1939, 1940 and 1941 as a whole; to ensure comparability, a statement of the number of employees they had reported in those years accompanied the request. The response to this request was very good, although procurement of the data took considerable time, particularly where the employers had to assemble the necessary material from several sources.

Where no information was obtainable for particular firms, estimates were computed individually from their more recent reports, on the assumption that the changes shown in their individual levels of payrolls and average earnings in the period from 1938 would have conformed to the trends revealed in the figures for the numerous firms in the same industries and areas for which records were available. The residue of individual establishment records built up in this way was not large.

Compilation of the Data.- When 1939-41 data for the 25,000 individual active and inactive establishments were assembled from Census of Industry records, or obtained directly from the employers, the calculation involved the division of the establishment-payroll totals by 52, to obtain weekly average figures of wages and salaries in the various industries. This was followed by the tabulation of these figures and those for subsequent years, together with the corresponding figures of numbers of employees, arranged according to the Standard Industrial Classification. The final result will be a self-contained, comparable set of annual average statistics of employment, payrolls and average weekly wages and salaries from 1939 to date, with comparable monthly figures from June 1, 1941.

Explanation of the Methods Used in Preparing the Monthly Statistics of Employment,
Payrolls and Average Earnings.

General.- The monthly surveys of employment and weekly payrolls relate to the following industries: (1) forestry (mainly logging), (2) mining (including milling), quarrying and oil wells, (3) manufacturing, (4) construction, (5) Transportation, storage and communications, (6) public utility operations, (7) trade, (8) finance, insurance and real estate and (9) specified branches of the service industry, chiefly hotels, restaurants, laundries, dry cleaning plants, recreational and business services. For reasons of economy in time and money in collecting and processing the statistics, the surveys do not cover firms usually employing less than 15 persons; establishments reducing their staffs below this minimum are not necessarily removed from the mailing list. Data are requested for all classes of employees, irrespective of their functions in the business; statistics for the owners are not included. Employers operating in two or more lines of business, or in different provinces or cities, are asked to furnish separate monthly returns for their establishments in the different units.

1. Coverage.- Although the monthly surveys are virtually limited to establishments having 15 employees or more, a large and relatively even representation of employment is secured from the various provinces and the larger cities for which data are segregated. However, a rather uneven though still large industrial representation is obtained, depending upon the organization of particular industries in large or small units of operation. Complete information respecting the distribution of the working population is available only at the dates of the Decennial Census. The distribution of the persons employed at June 1, 1941, by the firms co-operating in the monthly survey, in comparison with the distribution of the wage-earners and salaried employees enumerated in the Census of June 1, 1941, was discussed in the 1944 Annual Review of Employment. There is a steady growth in the number of firms reporting to the monthly survey, particularly in the industries in which the coverage is low; steps taken to guard against an upward bias in statistics due to this factor are outlined later in Section 5. On the basis of available material, it is estimated that the coverage in the various industries now ranges from about 58 p.c. in the hotel-and-restaurant and laundry-and-dry-cleaning group, and 60 p.c. in trade, to some 94 p.c. in mining and 88 p.c. in manufacturing; the last two proportions are based on the statistics of the Annual Census of Industry, relating to practically all establishments in the indicated industries. It is estimated that the composite index of employment in the major non-agricultural industrial groups relates to approximately 85 p.c. of the total paid workers in the same industries throughout Canada. Of the total wage-earners and salaried employees in all industries, including agriculture, government and education services, and the other classes excluded from the monthly surveys, as well as persons employed in the industries which are represented, the coverage of the monthly survey is estimated at about 63 p.c.

It is important to note that the statistics of persons employed, as published in the monthly bulletins, do not represent estimates of the total numbers engaged in the specified areas or industries, but show only the distributions of the men and women on the staffs of the co-operating employers at the indicated dates; the statistics of average weekly wages and salaries represent the earnings of their full time and part-time employees.

2. The Questionnaire.- The questionnaire used in the monthly surveys asks employers to state the number of wage-earners and salaried employees on their payrolls in their last pay periods in the months, with payroll disbursements in the same pay periods; employees and earnings are grouped according to the duration of their pay periods, whether these be monthly, semi-monthly, fortnightly, weekly, etc. Gross payrolls are requested, before deductions are made for taxes, unemployment insurance contributions, etc. Overtime payments, cost-of-living allowances, commissions, incentive and production bonuses are also included, as are payments for periods of absence-with-pay taken in the reported pay periods. The statistics include full time, casual and part-time employees and their earnings.

3. The Processing.- Statistics of wages and salaries reported for any period exceeding a week are reduced for tabulation purposes to one week's proportion of the totals, the numerators of the fractions used for this purpose being 5, 6 or 7 days, depending upon the

number of days per week on which the establishments operated in the pay period; the denominators of the fractions are the number of working days in the different pay periods. For employees paid at annual or monthly rates, whose earnings are not affected by variations in the number of working days in the month, fixed proportions are used to reduce the earnings to a weekly basis, irrespective of the length of the calendar month. The sums resulting from these various calculations are then aggregated to give the total amounts which would be paid for services rendered in one week by the employees of the co-operating firms. The workers reported are not necessarily employed for a period of a week by any one establishment. In order to guard against duplication in the statistics of employment where individuals may appear on the payrolls of more than one employer in a period of several weeks, establishments are asked to furnish data only for the last pay period in the month for their various classes of employees.

4. The Tabulation.- The material tabulated each month shows the number of workers drawing pay from the establishments furnishing returns, and the weekly earnings of such employees, with similar information for the men and women employed by the same firms a month earlier, and in the basic period (1939). The statistics of the first tabulation for each month are preliminary; the re-tabulation of the data on the succeeding month's tabulation permits the incorporation of revisions in the material originally tabulated, and the inclusion of returns received too late for the preliminary tabulation.

5. The Index Numbers.- The index numbers of employment and payrolls represent the percentage relationships between the employees of the establishments currently furnishing data and their aggregate weekly earnings, and the corresponding 1939 average figures of these employers. The 1939 figures of employment and payrolls for firms which have since gone out of business are continued in the basic averages; firms or branches opening for business since 1939 are tabulated with zero base figures. The basic averages of establishments which operated in 1939 but have since been added to the mailing list, have been incorporated in the base figures from the date when their co-operation was first obtained. The index numbers of average weekly wages and salaries relate the average earnings of persons employed by the reporting firms at a given date to the average earnings of their employees in 1939.

6. The Weekly Wages and Salaries.- The average weekly earnings represent the division of the aggregate weekly wages and salaries disbursed in the last pay periods in the month by the co-operating establishments, by the number of their full time and part-time employees in the same pay periods. The figures represent gross earnings, before deductions are made for unemployment insurance contributions, taxes, etc. They include overtime payments, payments made for periods of absence in the reported pay period, and commissions, cost-of-living, production or incentive bonuses where paid.

Footnotes.

The following footnotes explain the content of various industrial classes listed in the detailed tables in this bulletin. In some industries, the group breakdown is less extensive than in the Standard Industrial Classification; in these cases, figures for certain categories not shown are contained in the group totals.

- (a) Alluvial gold and auriferous quartz mining.
- (b) Copper-gold-silver; iron; nickel-copper; silver-cobalt; silver-lead-zinc, and miscellaneous metal mining.
- (c) Non-metal mining and quarrying, clay and sand pits.
- (d) Carbonated beverages and wines.
- (e) Biscuits and crackers; miscellaneous foods.
- (f) Leather gloves and mittens; tanneries; miscellaneous leather products.
- (g) Miscellaneous wood products.
- (h) Paper boxes and bags; roofing papers; miscellaneous paper products.
- (i) Household, office and store machinery; machine tools; machinery, n.e.s.
- (j) Abrasive, asbestos, hydraulic cement, clay, glass, lime and gypsum, stone, concrete and miscellaneous non-metallic products.
- (k) Buildings and structures, other construction, and special trade contractors.
- (l) Interurban bus and coach and urban and suburban transportation systems.
- (m) Includes services incidental to water transportation.
- (n) Gas manufacture and distribution; water and sanitary services, and other public utilities.
- (o) Chiefly recreational and business services.
